MEDICAL DEVICE

## CARBTEK ADVANCED™ “The Miracle Gas”

Our skin changes over time, losing its youthful look and giving way to wrinkles, laxity, cellulite and stretch marks.

Carbtek Advanced™ system is a safe, minimally invasive, clinically proven method to rejuvenate, restore and recondition the skin.

Results can be rapid and dramatic. The treatment has no downtime and a single session can take between fifteen minutes and an hour.

A simple and safe procedure for beautiful, younger looking skin.

### How it works

As we age, subcutaneous capillaries become dormant, decreasing circulation and depriving cells of oxygen; this, combined with environmental stresses and other variables, inhibits the ability of cells to regenerate and function properly.

Carbtek Advanced™ infuses CO<sub>2</sub> just beneath the skin's surface; the body interprets this as an oxygen deficit and responds by increasing the flow of blood. This provides a surge of oxygen and nutrients to the treated area and improves circulation, resulting in cell restoration.

# Is CARBTEK ADVANCED™ right for you?

Carbtek Advanced™ dramatically:

- fades stretch marks
- diminishes cellulite
- tightens loose skin
- brightens and firms the eye contour

## How many sessions before I see an improvement?

Most people observe improvement after the first treatment, though it usually takes up to one month for the body to properly react to the process. More pronounced and long-lasting results are observed after 4 to 12 treatments, by which time the skin shows clear signs of healthy rejuvenation.

## Is the treatment painful?

The treatment is completely natural. Some people may experience some mild discomfort but most find it less uncomfortable than electrolysis, laser, or waxing.

## Is there any downtime?

Carbtek Advanced™ is minimally invasive. There is no downtime.

## How long do the benefits last?

Carbtek Advanced™ is a retro-aging treatment, but it does not arrest the aging process; new cells will age naturally over time. At least one-yearly cycle is recommended.

## Is carbon dioxide toxic?

No, carbon dioxide is a natural byproduct of the body and not toxic.

# The Equipment

Carbtek Advanced offers the most advanced CO2 medical delivery system in its class on the market today.

Touch screen, 100% digital controls allow you to better regulate flow to ensure patient comfort and maximum treatment effectiveness.

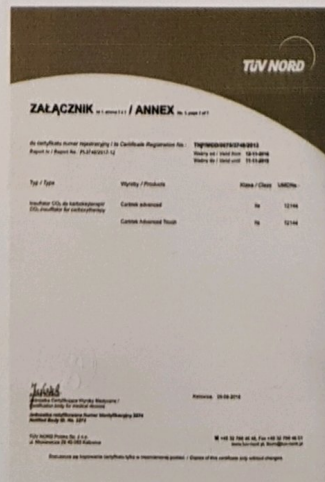

Provides heated gas (contracts collagen fibers with immediate skin tightening) and 150 ml/min flow, special for intradermal injection.

Double gas exits provides body treatment.

Carbtek Advanced is a revolutionary advance in Aesthetic Plastic Surgery and Dermatology.
