Nordlys Mini™

Dual-depth skin resurfacing.

Shallow and deep treatments for comprehensive results.

Nordlys Mini™

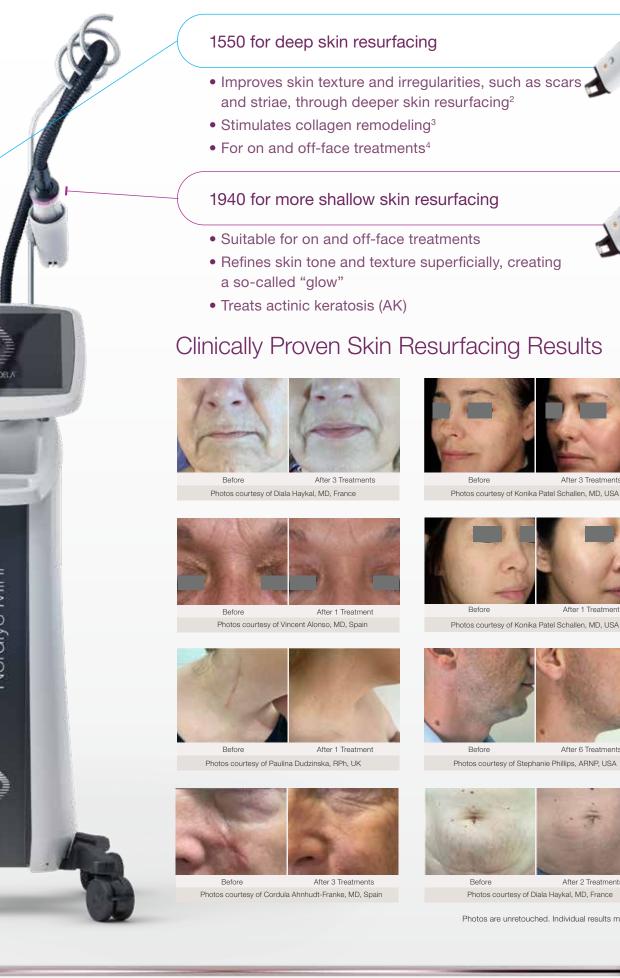

Transform skin resurfacing with our dual-depth non-ablative laser resurfacing device. Choose shallow and/or deep treatment approaches supported by the proprietary integrated SoftCool™ technology for more comfortable treatments and remarkable results.

Compared to ablative resurfacing, non-ablative skin resurfacing delivers energy to the skin in arrays of micro thermal zones (MTZs), which penetrate and coagulate specific areas of the epidermis and dermis. This technique preserves the stratum corneum, resulting in faster wound healing, improved tissue regeneration, reduced patient downtime and risk of adverse effects.¹

Benefits

- Advanced roller with unique magnetic motion sensor ensuring uniform results by controlling coverage area and density
- Intuitive user interface and built-in clinical intelligence for a short learning curve
- High ROI with a predictable business model due to low to no consumables
- Proprietary integrated SoftCool[™] technology for greater patient comfort during and after the treatment
- Customized treatments to meet your patients needs by adjusting pulse time and energy independently, ensuring optimal clinical efficacy and efficiency
- Option to select one or two applicators, based on practice need
