

QUANTIFICARE WINS AESTHETIC DEVICE AWARD

POSTED IN [NEWS](#)

3D photography company QuantifiCare has won the award for 'Best Aesthetic Device' at the annual AMEC European Congress.

The award, which was presented by EuroMediCom and WOSIAM (World Society Interdisciplinary Anti-Aging Medicine), was for the company's LifeViz Mini 3D camera, which was launched in March last year and is specialised for the face. The accuracy achieved by 3D reconstructed images in a compact and portable system impressed the judges who awarded the 3D LifeViz Mini the title.

With a 3D simulation tool and a skin complexion analysis module, the 3D LifeViz Mini is widely used by aesthetic practitioners, dermatologists and plastic surgeons in their daily practice, to foster communication with their patients and to document before-after procedures in 3D.
